Appl. No. 10/767,132
Amdt. dated July 1, 2008
Reply to Office Action of April 1, 2008

PATENT

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (currently amended) A system for ~~mapping~~ processing captured multimedia information ~~onto graphics~~ for insertion into a communication using an Instant Messaging (IM) application, wherein the insertion is based on multimedia information, the system comprising:

an information capture module for capturing the multimedia information in the vicinity of a machine on which the user is using the IM application;

~~an information extraction and interpretation~~ a processing module communicatively coupled with the information capture module, for ~~extracting relevant information from the captured multimedia information and interpreting it~~ processing the captured multimedia information in real time to create a graphic; and

~~a mapping module communicatively coupled with the information extraction and interpretation module, for mapping the interpreted information onto a graphic;~~

an Application Program Interface module for the IM application, communicatively coupled to the ~~mapping~~ processing module, for inserting the graphic into the communication in real time using the IM application, said inserting only occurring after detecting a trigger from a user.

2. (original) The system of claim 1, wherein the multimedia information comprises at least one of audio information, still image information, and video information.

3. (canceled)

4. (currently amended) The system of claim 1, wherein the ~~emoticon~~ graphic is ~~predefined by the IM application~~ one of a low resolution image with accentuated expression information, an animation and a stylized version of a person's face.

Appl. No. 10/767,132
Amdt. dated July 1, 2008
Reply to Office Action of April 1, 2008

PATENT

1   5.   (currently amended) The system of claim 1, wherein the ~~graphic is~~

2 ~~predefined by a third-party application~~ trigger is one of a button press, a camera selection, a

3 voice command, and a gesture.

1   6.   (currently amended) The system of claim 1, wherein the graphic is <u>an</u>

2 <u>emoticon</u> ~~created by the user~~.

1   7.   (previously presented) The system of claim 6, wherein the graphic is

2 created by the user by processing captured multimedia information.

1   8.   (currently amended) A method for ~~mapping~~ processing captured

2 multimedia information ~~onto graphics~~ for insertion into a communication using an Instant

3 Messaging (IM) application, wherein the insertion is based on multimedia information, the

4 method comprising:

5   receiving the captured multimedia information;

6   ~~interpreting the captured multimedia information; and~~

7   ~~mapping the interpreted information onto a graphic:~~ processing the captured

8 multimedia information in real time to create a graphic; and

9   inserting the graphic into the communication in real time, said inserting only

10 occurring after detecting a trigger from a user.

1   9.   (original) The method of claim 8, wherein the multimedia information

2 comprises at least one of audio information, still image information, and video information.

1   10.   (canceled)

1   11.   (currently amended) The method of claim 8, wherein ~~the step of mapping~~

2 ~~the interpreted information onto a graphic comprises:~~

3   ~~selecting one graphic out of a plurality of graphics predefined in the IM~~

4 ~~application~~ said graphic comprises one of a low resolution image with accentuated expression

5 information, an animation and a stylized version of a person's face.

Appl. No. 10/767,132
Amdt. dated July 1, 2008
Reply to Office Action of April 1, 2008

PATENT

12. (currently amended) The method of claim 8, wherein the ~~step of mapping the interpreted information onto a graphic comprises:~~

~~selecting one graphic out of a plurality of graphics predefined in a third-party application~~ trigger is one of a button press, a camera selection, a voice command, and a gesture.

13. (currently amended) The method of claim 8, wherein ~~the step of mapping the interpreted information onto a graphic comprises:~~

~~selecting one graphic out of a plurality of customized graphics created by the user~~ graphic is an emoticon.

14. (previously presented) The method of claim 8, further comprising:

determining whether said trigger has been received;

responsive to the trigger being received, capturing the multimedia information.

15. (currently amended) A method for creating a graphic for a communication using an IM application, based on captured multimedia information, the method comprising:

receiving the captured multimedia information; and

processing the received captured multimedia information in real time to create a graphic;

inserting the graphic into the communication in real time, said inserting only occurring after detecting a trigger from a user.

16. (previously presented) The method of claim 15, further comprising:

inserting the graphic into the communication using the IM application.

17. (previously presented) The method of claim 15, further comprising:

storing the graphic for use in a later IM communication using the application.

18. (previously presented) The method of claim 15, wherein the step of processing the received captured multimedia information to create a graphic comprises:

reducing the size of the captured multimedia information.

Appl. No. 10/767,132
Amdt. dated July 1, 2008
Reply to Office Action of April 1, 2008

PATENT

1   19.   (previously presented) The method of claim 15, wherein the step of

2 processing the received captured multimedia information to create a graphic comprises:

3   reducing the resolution of the captured multimedia information.

1   20.   (previously presented) The method of claim 15, wherein the step of

2 processing the received captured multimedia information to create a graphic comprises:

3   selecting a frame from a plurality of frames of the captured multimedia

4 information.

1   21.   (currently amended) A system for ~~mapping~~ processing captured

2 multimedia information ~~onto emoticons graphics~~ for insertion into an electronic medium,

3 wherein the insertion is based on multimedia information, the system comprising:

4   an information capture module for capturing the multimedia information in the

5 vicinity of a machine in communication with the electronic medium;

6   ~~an information extraction and interpretation~~ a processing module

7 communicatively coupled with the information capture module, ~~for extracting relevant~~

8 ~~information from the captured multimedia information and interpreting it; and~~ processing the

9 captured multimedia information in real time to create a graphic

10   ~~a mapping module communicatively coupled with the information extraction and~~

11 ~~interpretation module, for mapping the interpreted information onto a graphic;~~

12   an Application Program Interface module, communicatively coupled to the

13 ~~mapping~~ processing module, for inserting the graphic into the communication in real time, said

14 inserting only occurring after detecting a trigger from a use.

1   22.   (original) The system of claim 21, wherein the multimedia information

2 comprises at least one of audio information, still image information, and video information.

1   23.   (canceled)

1   24.   (currently amended) A method for ~~mapping~~ processing captured

2 multimedia information ~~onto graphics~~ for insertion into an electronic medium, wherein the

3 insertion is based on multimedia information, the method comprising:

Appl. No. 10/767,132
Amdt. dated July 1, 2008
Reply to Office Action of April 1, 2008

PATENT

4   receiving the captured multimedia information;

5   ~~interpreting the captured multimedia information; and~~

6   ~~mapping the interpreted information onto a graphic:~~ processing the captured

7 multimedia information in real time to create a graphic; and

8   inserting the graphic into the communication in real time, said inserting only

9 occurring after detecting a trigger from a user.

1   25.   (original) The method of claim 24, wherein the multimedia information

2 comprises at least one of audio information, still image information, and video information.

1   26.   (canceled)

1   27.   (currently amended) A system for ~~mapping~~ processing captured

2 multimedia information ~~onto graphics~~ for insertion into an electronic communication, wherein

3 the insertion is based on multimedia information, the system comprising:

4   an information capture module for capturing the multimedia information in the

5 vicinity of a machine the user is using for the electronic communication;

6   ~~an information extraction and interpretation~~ a processing module

7 communicatively coupled with the information capture module, for ~~extracting relevant~~

8 ~~information from the captured multimedia information and interpreting it~~ processing the captured

9 multimedia information in real time to create a graphic; and

10   ~~a mapping module communicatively coupled with the information extraction and~~

11 ~~interpretation module, for mapping the interpreted information onto a graphic;~~

12   an Application Program Interface module, communicatively coupled to the

13 ~~mapping~~ processing module, for inserting the graphic into the communication in real time, said

14 inserting only occurring after detecting a trigger from a user.

1   28.   (original) The system of claim 27, wherein the multimedia information

2 comprises at least one of audio information, still image information, and video information.

1   29.   (canceled)

Appl. No. 10/767,132
Amdt. dated July 1, 2008
Reply to Office Action of April 1, 2008

PATENT

1   30.   (previously presented) The system of claim 1 wherein said graphic

2   represents motion by said user.

1   31.   (currently amended) The system of claim 1 wherein said trigger is a

2   gesture by said user <u>and said graphic is a representation of something other than said gesture</u>.

1   32.   (previously presented) The system of claim 1 wherein said relevant

2   information extracted by said information extraction and interpretation module is in a non

3   graphic format.

1   33.   (previously presented) The system of claim 1 wherein said relevant

2   information extracted by said information extraction and interpretation module is mapped to one

3   of a preselected group of graphics, including graphics representing a smile, a frown and a wink.

1   34.   (previously presented) The system of claim 1 wherein said relevant

2   information extracted by said information extraction and interpretation module is an article worn

3   by said user.
